

globalsight Microsoft

GlobalSight is a Translation Management System (TMS) that manages and streamlines all of the tasks involved in the translation process.

why we implemented GlobalSight for Microsoft?

- saving time and cost
- simplified workflow
- easier TM management
- MT capability
- reduce bottleneck
- offer better translation experience for translator and reviewers

project management

60%
time saving

the system automates as much as possible, while providing tools for handling common tasks.

The workflow engine follows automatic rules and is highly customizable including project profiles, quote creation, leveraging and a connection to the Microsoft research machine translation engine.

engineering

35%
time saving

template for microsoft ready plug-in

reduced over 30 different workflows to 6 simplified workflows for a quick deployment/adaptation

- 01 Simple translation only
- 02 Simple translation with internal review
- 03 Complex translation with language sign off
- 04 Complex translation with client review
- 05 A Complex translation with bug triage by Engineering team
- 06 A Complex translation with internal/client review with language sign off

tm management

50%
time saving

benefits

Reduced project management overhead. Reduced engineering file preparation overhead. Financial control and reporting. Localization processes are less error prone.

set up and deployment

phase 1: workflow creation/adaptation
set up to mimic existing process and identify optimization opportunities

phase 2: internal deployment
leverage, notification and import/export testing

phase 3: client rollout
live jobs and final set up

outcome

After full deployment we have seen considerable efficiency gains in the overall localization process making it more streamlined and accurate.
